STRAWS IN THE WIND: CASUAL PARAGRAPHS ABOUT THE AEROFORMS (DISCS,"SAUCERS") -- THE CENTRAL AND BASIC FACTOR IN UNDERSTANDING THESE AND RELATED PHENOMENA -- THE MUROC BASE AFFAIR -- ANTI-GRAVITY RESEARCH AND OTHER ITEMS.	1 - 5
THE VOICE OF THE YADA: WHY REJECT INFORMATION FROM ANY SOURCE, SO LONG AS IT SEEMS LOGICAL AND HELPFUL? - ESPECIALLY ON MATTERS WHERE SCIENCE HAS NOTHING TO SAY. WE QUOTE THE COMMENTS OF EXCARNATE INTELLIGENCE ON THE MYSTERY OF THE AEROFORMS.	6 - 8
PUBLICATIONS RECEIVED - A COMING ROUND ROBIN FEATURE - MISCELLANEOUS ITEMS:	

- - - - - - - - -

"CLIPS, QUOTES, AND COMMENTS is issued on the 1st and 15th of each month, by the Borderland Sciences Research Associates, National Hdqrs. at 3524 Adams Ave., San Diego 16, California, USA. Twelve issues (six months) for $5.00: Six issues (3 months) for $2.50: Two issues, $1.00. Contains only short articles and miscellaneous material, supplementary to the BSR Bi-monthly RO ND ROBIN. N. Meade Layne, M.A., National Director.

STRAWS IN THE WIND

This is the kind of info-page we do not like to send out, and also do not like to keep all to ourselves at BSR Hdqrs. "Be not afraid", quoth Prospero; "the isle is full of noises." But whether these will indeed 'give delight and harm not' or merely confuse and annoy our Associates, is very doubtful. Your Director is not going to try to integrate all these notes. The last time he added 2 plus 2 it came out 5. We'll just call this the Straws in the Wind Bulletin - Kipling's wind that blows between the worlds, perhaps. If you have no interest in straws, this is the place to stop reading.

1. Conviction grows, that our sky visitors are interested primarily in the preservation of the planet - rather than of the human race. We can have all the minor wars we want, since we're so fond of them, but we are not to be allowed to use nuclear weapons. Thumbs down on that, because our earth is more useful in the solar system than another band of asteroids would be. The point is, the impact of nuclear explosions would probably trigger off the unstable geologic conditions. It is alleged that the E-people have said as much.

2. They have never intimated, so far as this writer knows, that they can or will prevent violent seismic disturbances. There have been occasional indefinite references to an 'evacuation of the planet'. This ridiculous idea would be quite feasible if the E-people want to carry it out themselves.. They can probably make space ships the size of a planet if they want to. (See Oahspe for many references to these).

3. Confirmatory of para. 2 above - nearly the whole of the long and complex activities of the E-ships (UFO's) seems to point to an exhaustive study of the planet and its rapidly changing physical conditions. They collect many samples of soil, rock, water, even (we're told) of the deepest sea bed, some 5-6 miles down. They don't pause often for friendly chats, partly because they have nothing to learn from us - after many centuries of earth visiting, and because they have more important business afoot. Such is the egotism of most humans, we cannot believe that WE are not the center of interest, for all Gods and men and worlds intangible.

4. One of our best informed Associates tells us: 'California has a rash of prayer circles - about one to the block in some communities. No particular denomination- just people getting together to say their prayers. A Bishop of the Catholic Church remarks: 'It looks like these people come from the place we have been calling heaven all these years.' How about Purgatory - since the good old cosmology will have to be worked in somehow? Our Associate thinks, this release of psychic forces may help a good deal - that we have 'already turned a corner'. We're all for prayer meetings, for all who can profit by them.

5. Our guess is, informed people, top-level in government and science, have been and are deeply concerned about certain physical planetary conditions, NOT about the character and intent of the visitors. That is, the problem has been the <u>significance</u> of the Visitation. Most of us have been too much intrigued by spectacular air-displays to think about the magnetic poles and the rising temperature of the sea-bed. Three factors, closely related: physical deterioration of the globe, the coming of the E-people, the menace of atomic weapons and atomic power.

6. The first of these involves, apparently, conditions throughout the solar system and even the stellar universes beyond.

7. Hardly anyone seems to have noted, that employment of atomic power for peaceful and industrial purposes cannot proceed until the disposal of the gunk (atomic wastes) is somehow solved. This gunk is accumulating at an extraordinary rate and the problem is urgent and dangerous.

8. One of our best informed Associates recently interviewed a well-known writer and lecturer (sorry to omit names - no can help). The latter's info. was, if the present increase in declination of the earth's axis continued for an additional 10-11 degrees there would be a complete tilt-over. This is far from a clear statement, of course - but it does not merit a brush-off.

9. What is the evidence for this alleged increase? We quote in substance a few lines from a letter written by an aeronautical engineer (&BSR Assoc.), to a Doctor K.M.C. of Cambridge University: "I was interested in the science article in TIME of Sept. 27, '54, which said in part that you believe the magnetic and geographic poles always stay close together. This would mean that migrations of the magnetic pole are accompanied by corresponding movements of the geographic pole - followed by changes of the earth's climatic zones."

10. The National Geographic Society (Washington, D. C.) stated (In reply to an inquiry made in Oct. 1954) that British explorers had reported the magnetic pole as situated in the Sverdrup Islands - hundreds of miles north of any previously recorded position, and more than 500 miles nearer the geographic pole.

11. On Oct. 4, 1954, the Santa Barbara News-Press said in part: "As for the earth's skin slipping, Dr. Roger R. Revelle of the U. S. National Research Council, and Dr. Walter H. Munk of the Scripps Institute of Oceanography, say, in Rome, that there is a slip of about 75 ft. per year between the earth's outer skin and her inner core. To make matters worse, the AP reports that these scientists confirm an increasing tip in the earth's axis."

12. It is probable to the point of certainty, that geophysicists have calculated the time factors as accurately as data will permit - for the rate of approach of the magnetic and geographic poles, for the rate of increase of skin slippage, and the rate of increase in tilt of the earth's axis.

13. Mr. Desmond Leslie is reliably reported to have said in Santa Barbara recently, that the earth's magnetic pole was moving about a degree a year. "The World Map" for Dec. 1951 (Nat'l Geographic Magazine, vol. C No. 6) places the No. magnetic pole not at the usual 70-51' No. lat. & 96-46' W.Long., but at about 73 deg. No. Lat. & 100 deg. W.Long. The Nat'l Geographic seems very reluctant or hesitant about any recent figures on this matter.

14. We are NOT making predictions - and we do not need to draw inferences. They are obvious to anyone. Refer, if you please, to the last sentence in paragraph 9 above. As to the cause of the accelerated migration of the magnetic pole itself - perhaps we should ask the Etherians what great and violent concussions may have affected the planet. The "tilt of the axis" is equivalent to a displacement of the earth-pole. The interrelation of these factors is probably too much even for the geophysicists, and we shall not attempt to unscramble them here. Add to these, climatic and weather abnormalities, the shifting of the warm zones, etc.

15. The major factors in what G. L. calls "the impending planetary debacle" are thus before us, and in most conspicuous aspect - no matter how obscure their workings. This is, (I think today) the Key to unlock all doors, including the silence of the prophecies and the Visitation of the Guardians. The moving finger writes, and having writ Moves on - # - -

16. Refer to last 8 words in para. 9 above. What will happen if the 'tip-over' takes place suddenly?

The material on this page was at first designed for the "P B"s, or personal bulletins. Perhaps it should be offered under the Sign of the Enterer - finger across lips.

17. Now about this Muroc Base affair (Edwards Air Force Base) - i.e., the alleged voluntary landing of several Discs or"Saucers", their examination by our technicians, AF experts et al., and a visit to the Base by four fairly well-known persons whose names we are requested NOT to print. We did NOT invent this story or anything similar, we have never asserted that it is provable (under present conditions), we had and still have confidence that the account is correct in essentials.

18. One of these four men who visited the Base is "an eminent Churchman." We are reliably informed that this eminent person, on being questioned directly, recently "refused to deny" that he made such a visit. As to whether he likewise refused to confirm, deponent sayeth not.

19. One difficulty - practically everyone who has any special information or experience to relate, is writing a book about it. Hints and semi-quotes and dark intimations reach us, that can't be printed on account of THE BOOK.
We are informed by Associates in England, that the press of Rhodesia is having a field-day, or Roman holiday, with our BSR reports on the UFO's. That is, they are said to be distorting, sensationalizing, lying, even worse that the press of dear old USA did for the years (say) 1946 '52. That's our private grief-and-whoa, of course - but it's worth noting, that sightings are very numerous in the tropics and southern hemisphere.

20. Back to the Muroc Base business. This is another straw of corroboration, not "provable", of course (whatever that word means). It's from Dr. George Hunt Williamson, who conducts a "Saucer Symposium" in Valor magazine. The Oct. 9 ('54) issue has the following paragraph:

21. "While in Calif. Desmond Leslie did a little Saucer research himself. He discovered that the rumored saucer at Muroc was actually there, and was kept under guard in Hangar 27. He spoke to one AF man who had seen the craft, and his investigation shows that on a certain day, a 100-ft object landed on the runway at Muroc. Suddenly men coming back from leave found they were not allowed to go back on the Base and were given orders to "get lost". Others had their personal belongings brought to them at the gate. Men on the Base that day were not allowed to leave. Leslie says he believes the Saucer has not left Muroc. President Eisenhower had a look-see at the craft during his Palm Springs vacation."

22. With special reference to the last sentence: Mr. Frank Edwards is quoted to us (reliably I believe) as saying: "I have definite information that President Eisenhower did NOT make such a trip or see such a craft". So, pay no money but take your choice! We have great confidence in Mr. Edwards - but there is so much (alleged) data that we cannot allow him to close the subject.

23. Dr. Williamson again: Writing us under date of Oct.18, '54, he says in part: "I am associated with a group of electrical engineers who are in constant communication with our space friends by a light beam process. On Sunday evening, 17th, the following was received by voice - (no more code is used).

"Caution our brothers on the San Andreas fault that shakeups may occur there within 7 days hence. Palomar will be shaken. Stress

watchfulness . . Deity . . and universal mind of the space visitors at this time".

24. "TAKE THIS FOR WHAT IT IS WORTH" writes Dr. Williamson. "I never put much stock in time predictions, but I know the contact is authentic because I saw the Saucer hovering nearby when we received the voice and were able to get it on tape. Future contacts both by radio and personal means were promised... I was told to give you this info about the San Andreas fault...."

25. Re this prediction about quakes along the fault line (Central California) - Oct. 17 to 24: a series of minor shocks have been felt in Southern Calif., and in adjacent parts of the southwest, beginning (I believe) a few days prior to the 17th. Most of these registered on the seismograph only.

---

26. ANTI-GRAVITY RESEARCH: The October 18th issue of Aviation Week prints being done in this field by the Glenn L. Martin Co. a brief statement of work

These studies are said to be rooted in Einstein's unified field theory, which is believed to contain the key to the nature of gravity and its relationship to electromagnetic phenomena generally. The goal is said to be not merely the development of more powerful propulsion, but to employ a "new force" to defy gravity.

There are nearly as many rumours about recent scientific work as there are saucer-tales. One of these is, that the Raytheon Company has solved the 'anti-gravity' problem. We hope that all our Associates, and particularly the physicists, will try to evaluate such reports (when it seems worth while) and pass their ideas along to Hdqrs.

27. Assoc. H.L. (St. Petersburg, Fla.) goes to a lecture by Aldous Huxley, hears him say over-population is now more menacing that the H-bomb, and sends us the cheery comment: 'Probably this second menace will take care of the first'. Things are getting so tough, we can't even have two menaces at the same time!

28. Notable (?) contribution from German science: Professor Hermann Oberth, rocket expert, says we're being visited by "Uranides" from outer space, and that they are a great deal smarter than we are. It's nice to have a name for things, even if that's all we do have.

29. And about two square miles of land near Falher (Alta, Canada) has sunk 150 ft below normal surface in less than a week. This is high plateau country, mixed farming, no mines. A small example, apparently, of what happened in the southern Himalayas 2 - 3 years ago, when mountain peaks subsided to surface level. Similar subsidences are an old story in the geological history of the earth - lately they have been reported from Italy and Pakistan - Himalayan quake was the greatest on record. -- Some scientists go along with what some of the Mark Probert Controls have said, about disintegration of lower strata of the earth's crust.

(last 2 items from Assoc. Lallie Hall)

30. The much derided "little men" continue to get into the picture. In France, two 3-ft men in metallic suits got out of a strange-looking craft that gave off a brilliant green light, and "hissed" (tut-tut!) as it departed. Also in Lisbon, Portugal, three small men in "aluminum" suits arrived and departed in a disc-shaped craft . . . . And Dr. George Hunt Williamson says, it's beyond human understanding how anyone can deny the existence of the UFO's.

31. VENUS SPEAKS is a 63-pg booklet put out by Regency Press, 43 New Oxford St., Lon. W.C. 1, purporting to be a "direct message from a scientist on Venus" and received "by direct telepathy through Cyril Richardson." Purports to tell "how a space ship works", life on Venus etc. The solicitous kindness of this communication is that of Gamaliel in the kindergarten, and will perhaps be found comforting by many who adopt a spiritualistic approach. Price 5 shillings net: (about .75).

32. KINGDOM VOICE is a four-page paper issued by The Kingdom Cottage, Grouselands, Colegate, Nr. Horsham, Sussex, England. Described as "not supported by any organization and carries no paid advertisements." One copy per month for one year, 8 s. ($1.20). As may be inferred, this publication is religionistic and chiefly concerned with bibical prophecies; but such material deserves serious attention if approached in the right way - and there are numerous quotations from other worthwhile sources also. "Single copies, 3 d" (.05)". Send a dime if interested.

33. MEDIUMSHIP - A Study in Human Sensitivity & its Development: by Gilbert N.Holloway, D.D., Ph.D. This is a 24-page brochure, admirably done, and a welcome addition to the long list of Holloway publications. A few of the section headings are: Etheric Worlds; Types of Mediumship; Meaning of Entrancement; Mark Probert as a Trance Medium; Experiences with Arthur Ford; Mediumship of Robert Douglass Carr; Psychic Pitfalls; The Character of Mediums; Low Etheric Influences; Meditation; Sealing the Aura; Psychometric Sensitivity; Apports & Materialization; Obsessions and Insanity; Psychic Sensitivity in the New Age. Factual and simplified knowledge of this kind will be (and already is) a "must" - an imperative requirement of the new era; neither the scholar nor the common man can do without it. "The story of the 20th century will be, the story of the Light from the Other Side" (wrote Egon Friedel). . . Address: The Holloway School; Box 27866, Los Feliz Sta., Los Angeles 27, Calif. Price $1.00.

34. A feature article of our next Round Robin (X-4, Dec.1) will be a review, by John Astley-Cock, M.A., of Les Soucoupes Volantes Viennent d'un Autre Monde, by Jimmy Guieu. If one discounts the wash drawings ("artists' conceptions") this book is admirably done and highly important, and the lack of an English translation has so far delayed its recognition in this country. We are fortunate to have this review, written especially for BSR Associates, by this distinguished critic and scholar, concerning whom we hope to append a few biographical notes. "The Flying Saucers are Coming from Another World" demands serious attention, and we hope the English translation (promised by Ouranos) will not be long delayed.

Correct address of the publishers of the French version will be sent on inquiry, and pending verification requested by us. (ml)

35. Q-ENERGY FILM: Originality House (480 Avalon Ave., Akron 20, Ohio) announces a copyrighted brochure (9 pgs.,this size) by E.G. Reed, Director of Research, entitled: "How to Build & Operate a Two-Way Stretching Machine." The machine is also discussed in detail in an article by Mr. Reed in Machine Design, November issue. For the brochure, send .50 to Originality House. The copyright does not prevent anyone from building the machine, but only from patenting it. . " Two-way stretched plastic is proving a remarkable aid in physical therapy insulation where mild heat is desired or to retain body temperature. It is essential in atomic research, and provides a means of generating unbalanced alternating positive negative static fields for experiments in physics of solids."

A small brochure describing the discovery, research, and general application of of the Q*Energy film (not the machine), with a small sample of the product, may be obtained from BSR Hdqrs for $1.00.

THE VOICE OF THE YADA

(We depart somewhat from the usual subject-matter of Clips & Quotes, to re - print certain statements made by the Mark Probert Control, the Yada di' Shi'ite (deep trance mediumship). Such sources are not equally acceptable to all our readers, but should not be rejected a priori - especially when they bear on the problem of the aeroforms, for which our science has no present explanation. And concerning Oahspe, whether one finds it intelligible and acceptable or not, it is essentially a book of the Etheric worlds, some knowledge of which is desperately needed and hard to come by. The Yada di Shi'ite, along with others of the "Inner Circle", has had much to say during the last eight years - and all of it worth respectful attention).

- - - - -

Question - by ML: We have been told here that Oahspe was dictated by a group of very ancient beings).

"Yada: Just a moment, sir. I will see what can be said of it".

(ML. Well, I've waited forty years so I suppose a few minutes more won't matter).

"No, sir. But tell me - does this moment seem any different to you now than the 40-year moment you have already spent? "

(ML. No, I suppose not)

"Some day we will talk of that; there is much to be said on it. Now excuse me...

(The Yada speaks aside in the YU language, then resumes in English):

"Sir, it has been said that this book, Oahspe, in part came from great Teachers who have existed in what is called the Etheric for some 25,000 years of earth time. Some of these - and there was a great band of them that projected their thoughts to this man Newbrough - were from a race of people, some of them very ancient an - cestors of the Chinese people, some from the Aryan race, the white people -- many of them of large stature, seven feet tall and more, with blond skin and blue eyes. These I speak of have been off the earth plane for a great length of time. They do not exist or have consciousness in my plane, but in what is called the etheric plane. They have been off the wheel of physical life for a long time. They were the originators of that very lovely language, the Sanskrit."

(ML. Do you know what their reasons were for dictating this enormous book?)

"Like much writing, it has come before its time. These writings belong not in the hands of the people - though as long as they do not understand it, it does no harm."

(ML. You mean it would do harm if they were understood?)

"Yes, because in these writings lie some of the deepest secrets of magic, with which man cannot yet be trusted."

(ML. Some say that they understand it, but I doubt that).

"I agree with you, sir. But the gentleman who wrote it did, I hope, get something from it."

(ML. It is basic truth, then?)

"It most assuredly is".

(It describes ships of incredibly huge proportions in the air. Is this all factual?)

"Yes, sir, it is. Let us for a moment try to forget your physical-chemical time and space. Let us suppose all was gone - all material substance - and we were back in what is called the Black Void, which is not actually a place, but a state of consciousness. We must always get back to that. But realize that it is endless - endless - neither up nor down, nor high or low. Suppose now that a space ship could be constructed that would carry a thousand million souls. The Etheric is not like

"C.Q.C." C-9
November 1, 1954

(continued)-

the physical-chemical -- it has no shape or form except on demand, demand brought about by necessity. Can you not see that a plane, even that which we can consider in the physical body, of staggering size, would be merely a mote in the vast, endless void? It is so staggering, sir, so shocking to the untrained mind, not to speak of those who consider themselves trained, because the traininf is not in what you would call the physical-chemical way of thinking.

"You have bodies in your sky in which you could place this earth, millions of them, in that one body. So, sir, what is size? And this building of what are called planes and things that move has always been the way of consciousness. It makes a body to move a body around in, while the body it is moving around in is moving around in another body. Some time ago, my most honorable colleague, Lao-Tse, mentioned that in China they make an ivory ball, and another ball inside that, and another inside that, and so on. He said it was not a toy, and indeed he spoke truth. Life within life,within life, consciousness within consciousness within consciousness---"

(ML: To go back to the question of the 'flying discs' --- suppose a resident of Arcturus wanted to project one of these discs into our sphere, what steps would be taken to do so? Can you sketch them briefly?)

"Perhaps I may be able to do so: You leave this state of awareness and you go into what is called the subjective, or the state of the subjective called your dream-world. There things take form without your seeming to make an effort to make them take form. The reason they do is because there is a necessity for those things taking form. That necessity has come up out of the consciousness and, for your edification (nice word, eh?), approximately the same thing takes place not only in the etheric planes of consciousness, but right on down to your chemical world. Only, in the Etheric World they stop and think for a thing. They logically and with intent of purpose construct by thought.

"Now, when you go into what is called the Astral -- on one of which planes I am-- especially when you go into the Lower Astral, you have no consciousness of building things -- just as in your dream. The difference, then, between one on the Lower Astral and one on the Etheric is that the latter is consciously using his thought to build; he is building by design and purpose the thing he wishes. Now, sir, when you reach these higher planes of understanding you can project your thought from one state of consciousness into another state of consciousness. I am sure you know of instances where a person having a very vivid dream wakes to find himself so keenly aware of it that it takes him some time to get back into what you call 'reality'-"

(ML: In the projection of these craft you were speaking of, you were giving a sequence of events that produced them; is it deliberate mental action?)

"Very deliberate mental action. You know, when you go into samadhi, it is because you have mentally applied yourself to that objective. None of these things are to be attained without actual mental striving. All things that suddenly appear, or seem so, from our plane to yours, have been mentally constructed and then the image extended down to your plane of consciousness until it reaches the physical-chemical level and there takes on a physical-chemical action. Now, sir, all things are made up of electrical charges or mating in extremely rapid motion. Its degree of solidity depends largely on what it is going to be used for. It would be useless to have an object in your world that you could not grasp, that always eluded you every time you strove

(continued)
to pick it up. It would create frustration, would it not? So the essence of t h a t thing has come down to the selected level. . . ."

(ML: It would pass from the etheric immediately to our rate of vibration without any intermediate state?)

"Yes, because that is the next state immediately beyond yours. You have all heard of apports, of course. It has been told throughout the history of man that jewels, flowers, etc., have fallen out of space; they come from the Etheric. The Low Etheric world is that from which the soul comes into the physical-chemical world; it does not go back into that after-death -- at least, it does not stay there -- but goes into the Astral. Now, I must go."

-- e n d --

WALTER RUSSELL FOUNDATION:

"Our keynote of the 1953 August class was a study of the Wave as the basis of Creation, and that was the second step in our purpose of preparing our students for the great world catastrophe which will inevitably destroy the entire human race unless new knowledge and practise of the universal law of love comes within mass human consciousness within the next seven years to change our basis of human relations. You will remember we stated two years ago that the human race had but nine years left in which to turn right about face in human relations else it would perish. We can now say more, for the time has come in which we can say, that if man persists in using atomic fission to kill his neighbor, or for use in industry, he will not only exterminate his enemies by himself as well, for radioactive fission will gradually destroy our atmosphere"

(from the 1954 <u>News Letter</u> of the W.R.F. Credit Assoc. Thelma U. Moore).

The interwoven science and philosophy of Dr. Russell's writings make them difficult going for the layman - but I believe them to be <u>authentic</u> in a very high and profound sense of that word - and are so regarded by many scholars of distinction. The best approach to Russell's work is probably the booklet: The Man Who Tapped the Secrets of the Universe. De Vorss & Co., 516 W. 9th, Los Angeles 15, Calif. ¢ 50

"CLIPS, QUOTES, and COMMENTS" is issued on the first and fifteenth of each month, by the Borderland Sciences Research Associates, National Headquarters at: 3524 Adams Ave., San Diego 16, Calif., U.S.A. --- Twelve issues (six months) for $5.00; Six issues - (3 months) for $2.50; Two issues, $1.00. Contains only short articles and miscellaneous material, supplementary to the B.S.R. bi-monthly ROUND ROBIN. -- N. Meade Layne, National Director.

CLIPS, QUOTES, COMMENTS

STRAWS IN THE WIND - MISCELLANEA:

CHEERIO! -- Newsweek of Nov. 8, '54 prints the following cheery paragraph:

> "The Inside Story: ATOMIC ENERGY COMMISSION: Whether the public should be told the truth about the devastating radioactive fall-out from H-bomb explosions is the subject of a bitter behind scenes argument between the AEC and the Civil Defense Administration. One estimate now is that the H bomb tested last March at Eniwetok rendered uninhabitable an elliptical area of 4000 square miles - nearly the size of Connecticut - downwind from the blast."

The underscoring is ours. That's on page 17, and if you'll turn it over to page 18 you may read under the heading GREENLAND: "New calculations here indicate that if the arctic continues warming up for the next 50 years or so at the rate it has since 1900, the Arctic Ocean may be virtually ice-free part of the year. This could mean rising water levels throughout the world, changes in climatic belts thruout the Northern Hemisphere - and important differences between East and West."

(Instead of having fifty years grace, suppose the due date rolls around in fifty days - or hours - with a shift of the spin axis of the globe. The ice is 1½-2 miles deep in the Antarctic - assume a rapid melting - and the Age of Aquarius --

YES, WE HAVE NO CENSORS: The Editor of NEXUS, Mr. James W. Moseley, prints a suggestive paragraph in his November issue: It seems Editor Moseley promised his readers something extra-special, derived from "irrefutable documented evidence", but now offers the following instead: "I now owe my readers an apology. The documents referred to are no longer in my possession. I am not at liberty to make any further reference to them, nor am I permitted to elaborate as to why the information the information I promised you cannot be present in this or any future issue. Suffice it to say that I simply am unable to publish this information, as much as I would like to do so. I would like to caution all flying saucer researchers to be extremely cautious in dealing with certain phases of the Saucer Mystery".

One Moral maybe - beware of future tenses. Or - the more news there is, the less the public hears about it. F'rinstance, there's a terrific rash of 'saucer' sightings in Europe and in the southern tropics - and people write to us asking if the whole saucer excitement is over and ended, since 'there's nothing in the papers.'

The distinguished psychologist Dr. C.G. Jung shows true scientific caution, admits that "something is being seen", doesn't believe in space ships, blames the Air Force for irresponsible journalism, but is willing to speculate about the effects of an (improbable) invasion from another world. And what he says on this point is too true and too important for for our contemporary world to understand:

> "Should the origin of these phenomena turn out to be extra-terrestial, it would prove an intelligent interplanetary link. The impact of such a fact on humanity is unforeseeable. . . We would be in the position of a primitive society that clashes with a superior culture. All initiative would be wrested from us. As an old witch doctor once said to me, with tears in his eyes: We would have no more dreams. Our science and technology would go to the junk pile. What it would mean morally we can guage by the pitiful decline of the primitive cultures that takes place before our eyes. Our world would roll up its Iron Curtain and use it for scrap. . . This might not be so bad - but we would have been 'discovered' - and colonized."

For an excellent fictional presentation of this same thesis, read CHILDHOOD'S END, by A.C. Clarke. Ballantine Books, 404 - 5th Ave., N.Y. 18 (.35)

RAYMOND NATALLI - Concerning the Aeroforms: NOV. 3, 1954)

"The space craft will not run on magnetic propulsion beyond the ionosphere. The ionosphere would destroy any magnetic sink between the craft and the earth. Beyond that limit they operate on solar energy. There is almost no effect of the earth's magnetic field beyond the ionosphere. The magnetic field will change according to the density of the nearest body. The craft will depend almost entirely on the solar energy. The colors noted about these craft are not due to temperature changes, but to electronic changes. No earth metal could stand such heat changes without becoming very brittle. It is the play of electrons produced by the solar radiation on the body of the craft and produces conditions similar to those that cause the aurora borealis."

(Raymond Natalli is one of the oldest and best known of the Mark Probert Controls - deep trance mediumship, and has a remarkable scientific equipment).

WANTED BY BSR HDQRS: Services of some Associate (or in exchange for free membership) who lives near Grandby, Colo., (W. & N. of Denver), or anywhere near the National Park which begins near Granby - to report on UFO sightings. Write to M.L., Director, BSR Hdqrs., 3524 Adams Ave., San Diego 16, Calif.

ANGEL MIST - SILVER COBWEBS - or What-you-Call-it: The Discs have been leaving this kind of trail all over the place; latest, a three-mile track of it left by a cigar-shaped craft (seen by two school teachers and their 60 pupils), over Marysville, Ohio (INS of 11-2-54). The stuff felt and looked like asbestos, could be picked up and 'could hardly be broken', but disintegrated within a minute after being touched, and before disappearing would roll up into a ball. One of the teachers reported her hands turned green after handling the thread, but that the color came off with soap and water. The other teacher said that the green on his hands disappeared in about half an hour without being rinsed.

Not long ago someone trying to collect this stuff "was advised by the Observatory" to pick it up on a stick wrapped in black cloth. According to the clip we received, this worked, and some of it was gotten into a bottle and photographed. What became of this specimen, whether any chemical analysis was attempted, etc., we know not. Also, we are extra-curious to know how anyone on an observatory staff happened to have information like that. We bring up this whole matter here, in the hope that some Associate will be out with black cloth and bottle and camera at that rare right moment and so help to unscrew the inscrutable a millimeter or two . . .

MUROC BASE: Items, tag ends of evidence continue to come to us (see C-9 of Nov.1) concerning the landing of Discs at this Air Base and the presence there, now, of one of these craft. This story was first given out by us, subject to confirmation but probably correct - no definite "proof" possible at that time. It is not possible <u>now</u> - and Frank Edwards says it is not true. The BSR Director thinks it IS true in all essentials, and the Old Man with the Scythe will give us the verdict.

MUCH ADO: One night in the fall of 1946 a huge craft, certainly not of this world, cruised for many hours over San Diego. Mark Probert was then holding almost his first meetings, and some irresponsible Control made a wild guess about what was happening, and we printed it for the sake of the record. Other Controls for eight years past have uttered hundreds of pages of advanced science and metaphysics, commanding the respect of specialists. But some pseudo-critics have never gotten past that first initial nonsense. We refer especially to Mr. John Bessor, who often attacks the MP seances in print - and has never learned anything from them, or about them, and never will.

ASTRONOMER CERTAIN that Space-Men are visiting East Africa: This is a front page headline of a two-column article in the Johannesburg Sunday Express, Oct.10,'54. "Visitors from outer space are probably observing and mapping the earth .. is the considered opinion of the vice-president of the Kenya Astronomical Association, Mr. C. Duncan Fletcher ... after a deluge of reports from scores of observers throughout the three East African Territories. Mr. Fletcher thinks there is no question about the genuineness of the reports given by experienced observers ... The most encouraging thing is that these objects seem to be friendly toward the people of this planet. Countless reasons could be offered as to why there should be many more planets capable of supporting life. . . These forms of life could be completely different from any that we can imagine . . . Their approach to us is, I suggest, similar to what our own would be if we were visiting (say) Venus. We would map and photograph and investigate thoroughly before landing . . Vigilance and a friendly attitude toward their overtures would appear to be the best course . . ."

The principal interest here lies in the fact that probably not a single astronomer in the U.S. would make an equally candid public announcement - though they have equivalent information and possibly a good deal more. . . Our own correspondence increasingly indicates that sightings are as numerous in the tropics and southern hemisphere as they are over the USA. (ml)

(Clip from Johannesburg Express, by Assoc. D.T. Kenney, Pretoria, S.A.).

Headlines from the Press: Hot Rain Points to Red A-Blasts (this from northern Japan) -- Churchill Says Atom Blast Effect could Last 5000 years. -- Mrs Luce and Others See Odd Object Moving in Sky Over Rome -- Cobwebs on Trees (a three mile trail of them left by a 'saucer': Marysville, Ohio)-- Pint-Sized Man with Pointed Ears Flees in Saucer, etc. (Coldwater, Kans) --

Upper Austria, Morocco, Algeria report red, blue, green UFO's. France has a rash of the Aeroforms, often in groups or flights of 10 or 12 --

Described as Flying Mushrooms, a Flying Snail, Flying Cigar, Flying Beer Bottles (quart size, with yellow tails). Nearly all the 'Saucer' magazines are listing and describing such sightings by the hundreds. All this information is important, but its real importance, of course, lies in preparing the way for understanding the basic nature of what is happening - the Who,What, Why, How of this incursion. So, RR and CQC do not give much space to reports of sightings, but others are doing a good job at it and we gladly refer our readers to them.

WELCOME BACK to Ralph Holland's VOICE FROM THE GALLERY (Interim General Letter 7) a copy of which has just come to hand. Out of four pages of interesting material I quote a single important item: "ALL HAM OPS. Please monitor from 450 down to 400 K.C. This range is assigned to directional signals, but several report mysterious voice messages, as well as very rapid "CW", possibly machine keyed. The latter has been heard on sets without BFO, which is "impossible" according to the text books. The speed probably would require tape recording and a slow play-back in order to decode it. If you pick up anything unusual, let us know.".

VOICE FROM THE GALLERY is published at 2520 - Fourth St. Cuyahoga Falls, Ohio. We recommend it to all Associates - and suggest that you enclose $1.00 when you write for your copy of this Interim Letter of Nov. '54 .

Nov. 15, 54

"ARE YOU COSMIC?"

(The Beacon Light Herald of October '54, Atascadero, Calif., quotes the following article from the Prescott Evening Courier of June 15, '54, under the title: Are You Cosmic?)

Dr. William C. Conway, D.D. of Redondo, Calif., told Prescott Lions yesterday that he has actually seen cosmic energy used to operate machines by remote control and to "pick up" unbroadcast conversations occuring hundreds of miles from the source of energy. Addressing the Monday noon luncheon of the Lions in the Hassayampa Hotel, Dr. Conway said that an eastern inventor has had, for some years, devices, that harness the tremendous cosmic energy taken from the air. The speaker claimed that the invention, made by John C. Roberts, who at one time operated a laboratory in New Castle, Del., had been suppressed in its presentation to public use "by vested interests."

Dr. Conway was introduced to the luncheon audience by Leslie Taylor, local hard-rock miner, who said he had known the speaker many years. Dr. Conway, Taylor said, is 89 years old, but looks many years younger. He is an executive secretary of the Greater Redondo Chamber of Commerce Consolidated and is presently on a good-will trip as a representative of that organization. Taylor said that Dr. Conway was interested in speaking to Prescott organizations with the idea of learning if this city would be interested in a community meeting to hear details of Roberts' experiments and successes with cosmic energy.

In his talk, Dr. Conway said that through an inheritance of information, Roberts was successful in harnessing cosmic energy and used it to operate machinery and to perform many other fantastic feats. The cosmic ray energy, Dr. Conway said, could be beamed through the earth without wires, and in working with the energy, Roberts found he could defy gravity.

Pointing out that he knew nothing about so called "Flying Saucers" and their source, he said that Roberts had, with his device, operated a toy saucer and during World War II, controlled a fleet of small "saucers" in a mock attack on Los Angeles that proved how vulnerable that city was to attack. Dr. Conway added that some pictures taken by Prof. George Adamski, who operates telescopes near Mt. Palomar, showing a supposed "mother" space ship giving birth to smaller craft, were almost certainly photos of Roberts' experimental craft.

Dr. Conway added that for some time, he himself was in possession of one of Roberts' devices, which was only the size of a wristwatch, but which proved to him the soundness of Roberts' work. He made the claim that the device could pick up conversations going on thousands of miles away and said that at Redondo, through use of the device, conversations between President Eisenhower and Prime Minister Winston Churchill, being made in Washington, D.C., and New York, were recorded on tape in the West coast city. He also said that Roberts' device was used during World War II to "freeze" the engines of German aircraft, sending them to the ground, and during the Ethiopian-Italian conflict in the 30's, to halt the mechanized forces of the Italian army.

"Roberts," Conway said, "realized the value of his discovery and the horror it could create if it fell in the wrong hands." He added that the inventor had been stymied in his attempts to take it to the government and had been the victim of "vested interests that did everything to stop him because he himself would not capitalize on his amazing discovery."

Dr. Conway said Roberts was "framed" into a five-year jail sentence and that during that time his wife disappeared and has never been located. Roberts' once-huge experimental plant at Delaware was disbanded. Recently, Dr. Conway added, Roberts was taken to Russia, from whence he escaped after a "brain washing" and his whereabouts is a secret not even known to Dr. Conway.

In reporting further on Roberts' invention, Dr. Conway said it could be used to foretell actions planned by this nation's enemies. He added that those in possession of the devices had attempted to warn the United States of the Pearl Harbor attack and spy activities of the Japanese on the West Coast before the December 7 attack.

Dr. Conway concluded his talk by pointing out that it was his hope that Americans would awake to what was going on and thereby bring Roberts and his device into the use that should be made of such genius and such an invention, which he said, could assure this country's safety.

THE Q-ENERGY FILM:

Rev. Verne L. Cameron, inventor of the Aurameter, has been testing the film with the instrument and writes us of the results: "I found that it gave off energy from one side only. This probably means that it should have that side next to the body for best results."

"Now since the film is highly magnetic (static magnetism) it will readily cling to a wall or other surface. I stuck a 7 x 9" piece of it to my inside wall and found that it projected a beam 190 feet long, passing through a wall. Outdoors, with it on my east wall, the beam was 416 ft. long to the eastward. This I deter - mined by the thrust on the aurameter, of course. Later I stretched a piece of kitch-en plastic by hand and found the beam to be 230 ft. long, out of doors. Then by placing a powerful Alnico magnet behind the film, and a piece of carbon (a flat graphite disc) in front, and taping the group to my garage wall, the beam projected to the enormous distance of 3200 ft.

"The carbon-magnet experiments have* been written up at intervals for years past, in various BSR publications, which told of the strange properties revealed by these elements, their effect on the nervous system etc., when the carbon (arc or battery rod) is held in one hand and the magnet in the other. . . Most of you are familiar with the Cones which I described several years ago. These are of sheet metal, any kind, and so shaped that opposite sidelines, base to apex, form a right angle at the apex. . ."

* (Our BSR booklet called VITIC* is out of print pro tem. We hope to have a reprint available before long.

(Q-Energy Film is a product of ORIGINALITY HOUSE, 480 Avalon Ave., Akron 20, Ohio. A small printed brochure is offered by BSR Hdqrs. @ $1.00, but the film itself must be obtained from the producers in Akron, together with statement of prices. BSRA will be glad to have reports from persons using the film for any therapeutic purpose).

NATALLI ON THE TIME-VACUUM

NATALLI: I am going to say something which may not be quite understood. While we have various densities it is still a difficult thing to reckon with, because it will be supposed by your scientists that in the last analysis the density would be so great that the medium could only be described as homogeneous. I have recently worked out a theory (part of which at least may be known to you.)

If we look at densities as blending slowly we arrive at a density which will be to all intents homogeneous. But this is not really the case. By basing on the quantum theory each state is periodical - a period-behaviour of the atoms. This period state can only come about (be conceived of) by thinking in this manner. The action of the atom in each grade of density is not a stable condition, but one which appears and disappears - a kind of blinking, so to speak, in lawful sequence. In each passing second or other fraction (of time) there is a different form of motion. A phenomenon of action taking place in one density, will cause another form of action to take place in another density. It is this action taking place in different dimensions which create what you call form. Now, we wonder where the atom is, in the fraction of time that it is not in action. There is a time vacuum existing between the period-states of motion. When an action takes place in the atomic world here in this density, it creates another form of action in another density. Here we have a cause-and-effect in play and spanning the gulf of the time interval. This can only be a time vacuum. There is a stream of force passing between the two densities. Due to the fact that we cannot ever get to a state of nothingness, this field between that we call the time intervals we may call a play going on between the two------A-(notes defective)-------A play or interchange between the proton and the neutron. They exchange energies until there is a kind of absorption of one of them. We wonder what has happened to the one - and how the absorption takes place again. Both are sending off energies, and those of one are picked up by other bodies. You have in this exchange a complete breakdown of the atomic body, and it pours itself across this time vacuum into another dimension, where in forming an atomic structure in that dimension it is moving at a different rate of speed. Possibly it has lost some of its electronic bodies in this new dimension and possibly it has added new electronic bodies, thereby creating a substance that will make form of a different kind. In other words, the atom in this new dimension will create a web-like structure with other atoms that will make a solid for that dimension.

Your time vacuum lies in the exchange of a neutron and proton in which one of these has absorbed the energy of the other. In that moment you have a time vacuum. But it is so fragmentary in its time period that there is as yet no way I know of to measure it.

In the division of matter into the fractions that one must keep on dividing it seems that you must come to the end of matter in your time dimensions only, for there are still endless fractions to be divided in other dimensions. Scientific minds for ages have tried to figure out by mathematics (which seems the only way) how to destroy matter (or energy or substance) completely. It can be done but only in your dimension of matter or time.

In the atom of your physical world, the nucleus is itself made up of other atoms with electronic bodies.

In the series of emanations, alpha, beta, gamma, etc., the gamma ray is the most potent; it is the essence of pure kinetic energy. This moves or the particles of this wave move in a jagged vibratory motion -in a saw-tooth motion - this gives

(Natalli On The Time-Vacuum - cont'd)

the wave its high penetrative power. Matter in forming structure creates a web or net. There is a web of energy between atoms. The radiation of the gamma ray on your plane destroys this energy web. It does not strike the nodes or atoms themselves, This causes confusion in the atom world. The nodes undergo a form of fusion. This takes place in physical organisms also, as in some forms of cancer.

The psyche works through the body as electricity works through a machine. Its action IS electricity. There are many kinds of electricity. There is that which is magnetic and that which is non-magnetic. As yet you know very little about these kinds.

Individuals undergoing electrical treatment should be typed as to electrical frequencies. This can be done quite easily by means of isotypes.

- - e n d - -

We have a protest, from time to time, against our printing rather difficult and technical material, such as the foregoing from the Natalli Control. Our attitude on the matter is as follows: For those who prefer the barest and most factual data, or on the other hand highly descriptive and sensational write-ups, there are many publications handling 'Saucer' material in such ways. We quote from them to some extent and recommend a number of them. They are full of interest and should be read, albeit with "critical receptivity".

But the real crux of the matter (the aeroform phenomena) is its significance- its interpretation. One can read, many of us have read thousands of pages of de - scriptive material, accounts of sightings, assertions and denials and wild guesses, from sceptics, devotees, mystics, publicists, investigators, scientists and pseudo-scientists, religionists, everybody who can be articulate in either this world or the next. Having read a few thousand pages of such material, one still finds no answer to the Who, What, Why, How of the riddle. No interpretation which is inclus-ive and 'saves' all the phenomena. Nothing which can probably be integrated with our science (in days to come), and has an understandable metaphysics with the sanct-ion of the ancient wisdom as well. But the BSRA were given such a basic interpreta-tion eight years ago, and it stands the test of all subsequent happenings.

The BSRA do not take credit for themselves, for this; it has been only a piece of incredible good fortune.

They have no 'axe to grind', no profit to make - but they feel an obligation to make their interpretation (received by them) accessible to the public.

This interpretation is not easily understood. Its essence can be grasped with-out technical equipment, and its practical applications by a little genuine effort. But it involves physical and metaphysical concepts, many of which are not acceptable to Western thinking, scientific or metaphysical or 'common'. Yet these will be basi to the culture of the future - if such culture there should be.

The BSRA, then, do believe they have something very different and very important to offer - more important than the endless tabulation of strange happenings (which are indeed most necessary). It is imperative that the new concepts be grasped, thou little by little, very slowly. To this end, they must be presented, not as propagan but at least as a kind of gesture in the public service - for those who care to hea them.

For this reason we give space to Natalli and his confreres - and, in Round Robin, to problems of Density, Matter, Energy, Frequency, Tangibility, and the ever-presen and everlasting ethers.
